Definitions and Guidance	
Project Classification	
New Trail: new trail concept and design that provides a new connection,	
destination, or purpose.	
Trail Renovation/Relocation: trail project that improves an existing trail or	
relocates the tread to a more sustainable design	
Trail/Greenway Facilities: trailhead development, stand-alone trail structures	
(i.e bridge), parking, signage, etc.	
Trail Tools/Trail Equipment: tools specifically used for trail development and/or	
maintenance, trail equipment purchased or rented specifically for trail	
development and/or maintenance	
Permitting/Planning/Design: fees associated with professional trail planning	
services, project design, or permitting fees pertaining to RTP project request.	
Applicant is limited to 10% of their total requested RTP funds for permitting,	
planning, and design fees. Must be part of a combination project.	
Combination scoring: applicants should select the classification descriptor that	
matches the primary objective for their project for the pre-application. For the	
final application, this ratio will automatically score based off their budget item	
classifications.	
Recreational Trails Program Category/Surface Type	
Applicant should select the option that best matches the specifics of the project	
they are seeking RTP funds for. For special scenarios like bridges or land	
acquisition, applicant should select the option that best matches the overall	
existing trail character or trail to be constructed. For tools or equipment,	
applicant should select the option that best matches the trail(s) the equipment	
will primarily serve.	
Trail Designation	
Authorized National Scenic or Historic Trails (located within NC): Appalachian	
Trail, Overmountain Victory Trail, Trail of Tears NH Trail (designated section or	
authorized under managing agency's trail master plan)	
Authorized State Trail: Mountains-to-Sea Trail, Fonta Flora State Trail, Hickory	
Nut Gorge State Trail, Yadkin River State Trail, Deep River State Trail, French	
Broad River State Trail (designated section or authorized under managing	
agency's trail master plan)	
Designated National Recreation Trail/Water Trail: one of the 27 currently	NRT Database
designated trails in the NRT database (American Trails)	
Trail located on State or Federal Lands: project located on lands managed by	
State or Federal agencies	
All other trails: any trail that does not fall into the above categories	
Economic Need	
Economic need: determined by NC Dept. of Commerce's annual county distress	County Distress Rankings
rankings. Applicant should select county in which the greatest majority of their	
project to be RTP funded lies.	

Management & Maintenance	
Management & Maintenance	
Applicant should submit documentation of management and maintenance	
commitments to receive applicable points.	
Full-time dedicated Parks and Recreation staff OR Organized volunteer group	
w/ MOU/MOA: trail project area will be maintained and managed by a full-time	
parks and recreation staff, where parks and recreation is the maintaining	
department's primary function. Alternately, the trail will be maintained by an	
organized and dedicated volunteer organization with a long-term written	
agreement in accordance with the managing agency. Full-time staff (e.g public works or other department staff): trail project area	
will be maintained by a department whose primary function is something other	
than parks and recreation (e.g. public works, fire department, etc.)	
Organized Volunteer Group: trail will be maintained by a volunteer group who	
has committed to maintain the project area but does not have a written	
agreement in force between the organization and land managing agency.	
Varying or Sporadic Volunteer Assignments: trail will be maintained through	
various volunteer groups, with no primary sponsor or written agreement between the land managing agency and volunteer organizations.	
No management or maintenance agreement: no management/maintenance	
agreement or plans, or no documentation provided.	
Trail Location	
Applicant should submit documentation of ownership or public access rights to	
receive applicable points. Public use rights should be guaranteed for a minimum	
of 10 years to be a qualifying project.

Governing Body Approval	
Applicant must provide documentation of its governing body's support, and that of the managing land agency if different from the applicant. Project should be fully approved by both agencies (e.g PRAF completed for State Park projects. This is a qualifying requirement for projects and not objectively scored.	
Subjective Scoring Examples	
Subjective Scoring Examples Exceptional - 5 Great - 4	Exemplary project that may meet a high recreation demand or fulfill a critical gap in trail infrastructure. Project is highly sustainable with no/minimal environmental impacts, is shovel- ready (including permitting), and has a precise and finalized budget. Application clearly and concisely imparts project scope and objectives, with pertinent and well-organized attachments. Has documented approval by governing bodies and diverse support among user groups. Outstanding project that might resolve a recreation need, represent an underrepresented user-group, area, or socioeconomic group. Project is shovel-ready, is aware of all permitting requirements but may not have them all fully in hand. Has well-developed budget with firm understanding of all project costs. Application is well-written with all necessary attachments. Has well-documented support.
Good - 3	Reasonable trail project with realistic goals and obtainable deliverables. Applicant is aware of all permitting requirements and has means to fulfill their due diligence. Public support is present but may not be widespread among other user groups. Project is shovel-ready or easily implemented. Project is sustainably designed and poses minimal impacts to the environment.

Fair - 2	Project is close to implementation but may be too vague or have unrealistic expectations or unrealized obligations. Project may not have a finalized design or layout. May have some sustainability concerns. Application may be missing details, or attachments may not fully support or describe intended project plan.
Low - 1	Project is allowable under FHWA rules but is not planned well. May have significant sustainability concerns. Application and/or attachments may lack or have insufficient information to adequately impart project. May not have stable land use agreements or governing body approval.
Not Allowable/Disqualified - 0	Project is not allowable under FHWA rules, state RTP guidelines, and/or is wholly unsustainable.
